

fn_vbs_arrayUnShiftStack

Introduced in	
Version:	1.30
Description	
Description:	Adds a stack (array) of elements to the beginning of an array and returns it. The input array is also modified by reference. Similar to fn vbs arrayUnShift , however, it adds the contents of an array instead of only one item.
Syntax	
Syntax:	[array,stack] call fn_vbs_arrayUnShiftStack
Parameters:	<ul style="list-style-type: none">array1: Array - Array to be added tostack: Array - Elements to be added to the beginning of array1
Return Value:	Array - Note, array1 is also modified by reference

Warning	
When using functions in VBS versions older than 3.4 , certain limitations and requirements should be kept in mind - the main ones being that capitalization of the function name is crucial, and that #include "vbs2\headers\function_library.hpp" has to be included in every script that utilizes it.
